About ShopEasy

ShopEasy is a modern demo e-commerce application built to demonstrate best practices in React development, rapid prototyping with Vite, and API simulation using JSON Server.

This project is ideal for developers who want to learn how to build scalable, interactive, and responsive web applications from scratch.

- **Frontend:** Developed with **React** for component-based architecture, ensuring maintainability and reusability. The UI is styled for a seamless and intuitive user experience across devices.
- **Development Workflow:** Utilizes **Vite** for lightning-fast development, instant hot module replacement, and optimized builds, making the development process efficient and enjoyable.
- **Backend Simulation:** Employs **JSON Server** to mock RESTful API endpoints, enabling realistic data interactions without the need for a real backend during development.
- **Core Features:** Includes product browsing, detailed product pages, cart management with quantity updates, and a fully responsive design that adapts to mobile and desktop screens.

- **Backend Simulation:** Employs **JSON Server** to mock RESTful API endpoints, enabling realistic data interactions without the need for a real backend during development.
- **Core Features:** Includes product browsing, detailed product pages, cart management with quantity updates, and a fully responsive design that adapts to mobile and desktop screens.

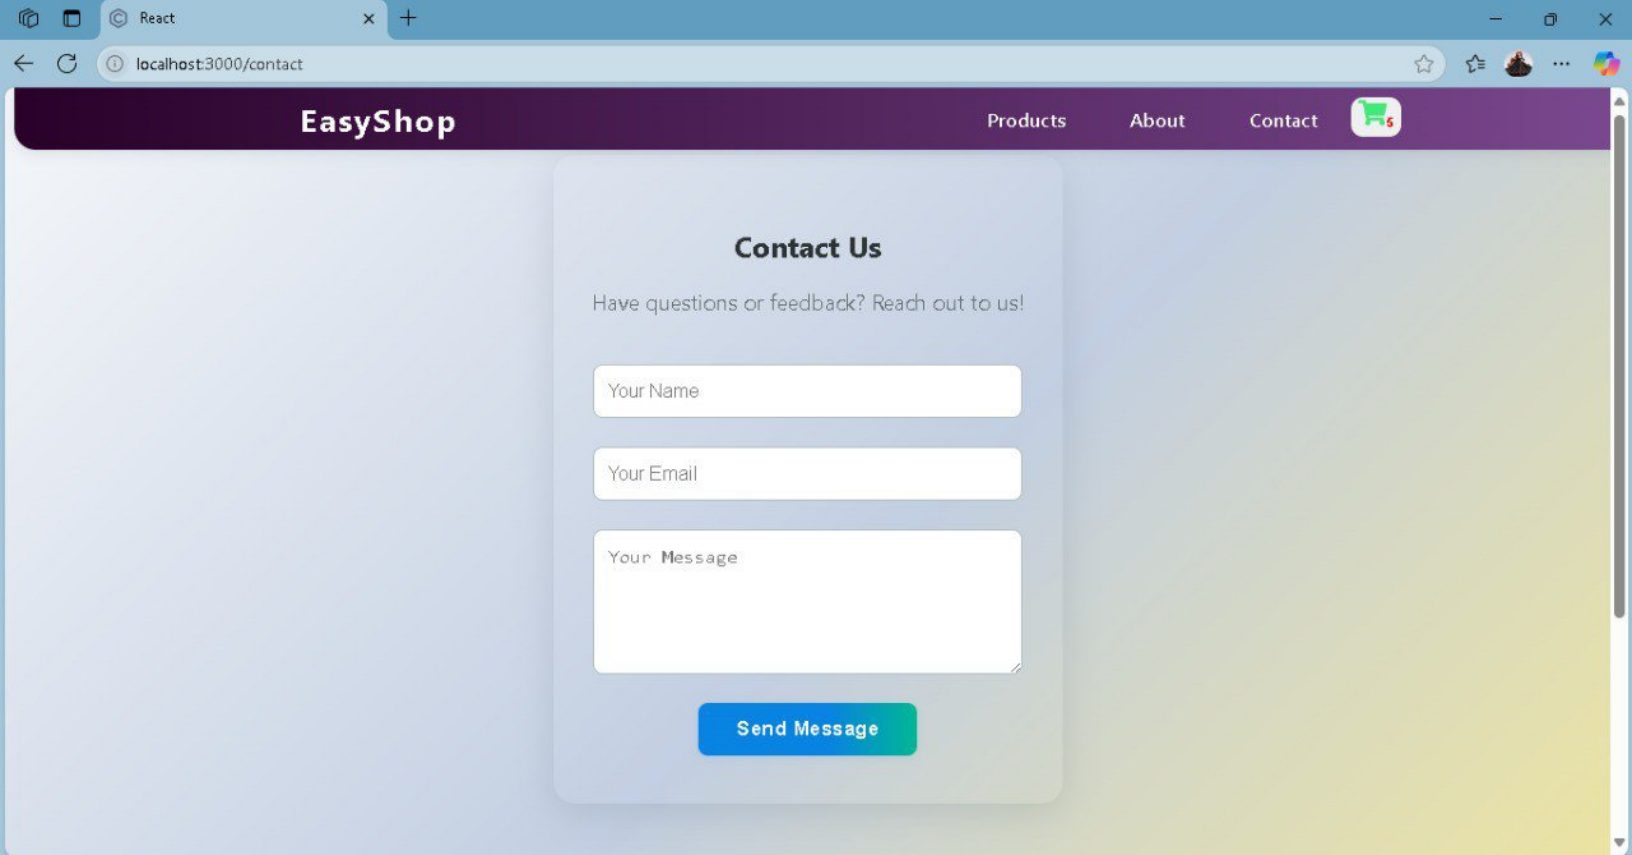

Note: ShopEasy is intended for educational and simulation purposes only. No real transactions are processed, and all data is for demonstration.
